PROPITHUB MOBILE

Version 2.4.0

iOS App Store Publishing & Release Guide

Standard Operating Procedure (SOP) • Expo & EAS Cloud Build Pipeline

1. APP & ENVIRONMENT SPECIFICATIONS

Parameter	Configured Value	Config File
App Name	Propithub	mobile/app.json
Bundle Identifier	com.propithub.app	mobile/app.json
Version / Build	2.4.0 (Build 1)	mobile/app.json
Expo Project Slug	propithub-mobile	mobile/app.json
EAS Project ID	42573962-ad60-49c1-825a-994d52e57d4c	mobile/app.json
Target Platform	iOS (iPhone & iPad supported)	mobile/app.json

2. PREREQUISITES & ACCOUNT SETUP

- **Apple Developer Program:** Enroll at developer.apple.com/programs ($99/year fee). Choose Individual (personal legal name) or Organization (corporate entity, requires D-U-N-S number).
- **Two-Factor Authentication:** Ensure your primary Apple ID has 2FA enabled on an Apple device or phone.
- **EAS CLI Installation:** Install the Expo Application Services command-line tool globally:

```
npm install -g eas-cli
```

- **Expo Account Authentication:** Log in with the Expo credentials managing nebzas-team:

```
eas login
```

3. APP STORE CONNECT INITIAL CONFIGURATION

Step 3.1: Register the Bundle Identifier in Apple Developer Portal

1. Log in to developer.apple.com/account/resources/identifiers/list.
2. Click "+" to create a new App ID -> Select "App".
3. Description: Propithub Mobile App.
4. Explicit Bundle ID: com.propithub.app (must strictly match app.json).
5. Click Continue and Confirm.

Step 3.2: Create the App Record in App Store Connect

1. Go to appstoreconnect.apple.com -> My Apps -> Click "+" -> New App.
2. Platform: iOS | Name: Propithub (or chosen brand title).
3. Primary Language: English | Bundle ID: Select com.propithub.app.
4. SKU: Unique reference code (e.g. propithub-ios-app).
5. Access: Full Access -> Click Create.

4. SCREENSHOTS, METADATA & COMPLIANCE

Apple requires screenshots for all supported screen dimensions before submission:

Device Class	Required Pixel Dimensions	Mandatory Note
6.7" iPhone Display	1290 x 2796 px (or 1179 x 2556 px)	iPhone 15/16 Pro Max (3-5 screens)
6.5" iPhone Display	1242 x 2688 px	iPhone 11 Pro Max / XS Max
13" iPad Display	2048 x 2732 px (Portrait)	Mandatory: supportsTablet is enabled

Key Workflows to Showcase in Screenshots

1. Tenant / Owner Unified Dashboard with live dues.
2. Lease Agreement viewing and cryptographic digital signing.
3. Security Deposit Ledger & Statutory Custody Voucher breakdown.
4. Unit Inspection Walkthrough with itemized damage deductions.
5. Maintenance Dispatch & Ticket Tracking.

Mandatory URLs & Legal Policies

- **Privacy Policy URL:** Public web link explaining data retention (e.g. https://propithub.com/privacy).
- **Support URL:** Public help desk or contact page (e.g. https://propithub.com/support).
- **App Icon:** 1024 x 1024 px PNG with no transparent alpha channel (configured in mobile/assets/icon.png).

App Review Information (Demo Credentials)

Apple requires dedicated reviewer credentials so they can test without SMS OTPs or real payments:

- **Reviewer Email:** reviewer-tenant@propithub.com
- **Reviewer Password:** Provide active password for testing
- **Reviewer Notes:** Explain that this is a residential property and lease management tool. Dues and vouchers in this test account run in sandbox mode with zero live banking transactions.

5. COMPILING THE IOS PRODUCTION BINARY

Propithub uses Expo EAS cloud compilation. No local Mac hardware is required.

1. Open terminal and navigate to the mobile folder:

```
cd mobile
```

2. Run the EAS iOS production build:

```
eas build --platform ios --profile production
```

3. When prompted: "Do you want Expo to handle your Apple credentials?", select YES.
EAS will automatically create and install your Apple Distribution Certificate and Provisioning Profile.

4. Wait for the cloud build to finish (~12-18 minutes). You will receive an .ipa download link.

6. SUBMISSION & TESTFLIGHT BETA DISTRIBUTION

Transmit the compiled production build directly to Apple App Store Connect:

```
eas submit --platform ios
```

1. Select the latest production build from the interactive prompt.
2. EAS transmits the package directly to App Store Connect servers.
3. Apple processing takes 10 to 25 minutes. You will receive an automated confirmation email once processed.

> **! Recommended: TestFlight Beta Validation**
> Before sending to App Review, go to App Store Connect -> TestFlight tab -> Internal Testing. Add your own Apple ID to test the exact binary on a physical iPhone. Verify push notifications, camera permissions, and document viewing.

7. FINAL APP REVIEW & RELEASE

1. In App Store Connect -> App Store tab -> 1.0 Prepare for Submission:
   * Scroll to Build -> Click "+ Select a build" -> Choose Version 2.4.0 Build 1.
   * Enter App Description, Keywords, Support URL, and Copyright.
   * Ensure App Review credentials and phone contact are filled.
2. In top-right corner, click Save, then click Add for Review.
3. Click Submit to App Review.
4. Timeline: Apple review typically completes within 24 to 48 hours.

Release Options

- **Automatic Release:** App goes live in all selected countries immediately upon approval.
- **Manual Release:** Status changes to "Pending Developer Release" until you press "Release this Version".
- **Scheduled Release:** Automatically releases at a designated date and time.

8. APPLE REVIEW GUIDELINES & PITFALL CHECKLIST

Review Guideline	Requirement	Propithub Safeguard Status
Guideline 5.1.1 (Privacy)	Permission descriptions for Camera/Photos	Configured in mobile/app.json infoPlist
Guideline 2.1 (Performance)	App must work cleanly without crashes	Full TypeScript validation (0 errors)
